a
Revisions over-react (2023-24)
lead 6 h
lead 12 h
Subsequent error $A - f_t$ (g/kWh)
Revision over last 2 h, $f_t - f_{t-4}$ (g/kWh)
b
Slope of error on 2-h revision
2023-24
2026
OLS slope (day-clustered 95% CI)
Forecast lead (h)
c
Errors persist (2023-24)
lead 6 h
lead 12 h
Current error $A - f$ (g/kWh)
Mean same-lead error of last 12 h (g/kWh)
d
Slope of error on recent same-lead error
2023-24
2026
OLS slope (day-clustered 95% CI)
Forecast lead (h)
